

Nama : Layla Ayu Rachmawati

NIM : 20220801458

UTS – Jawaban 2

```
def biodata():
    nama = input ("Silahkan Masukkan Nama Anda : ")
    NIM = input ("Silahkan Masukkan NIM Anda :")

    print("=====")
    print("PROGRAM QUIZ")
    print("=====")
    print ("Nama : "+nama)
    print ("NIM : "+NIM)
biodata()
```

The screenshot displays the Visual Studio Code interface with the file 'Jawaban2.py' open. The code in the editor is a Python function 'biodata()' that prompts the user for their name and NIM, then prints a separator, the program title 'PROGRAM QUIZ', another separator, and the entered details. The 'TERMINAL' tab at the bottom shows the command prompt output: the command to run the script, the input 'Layla Ayu Rachmawati' for the name, and '20220801458' for the NIM. The output shows the program title and the entered details. The status bar at the bottom indicates the file is at line 10, column 10, using UTF-8 encoding with CRLF line endings, and is running Python 3.10.7 64-bit.
